Profile Production Line

The profile processing introduction for extruding machinery will show how extruded products meet the needs of the market as well as the special characteristics of the plastics that are used and the efficient assembling uses in the production process. Materials that can be used for extrusion include PVC, HDPE, LDPE, PE, PP, ABS PS, PC and PMMA.

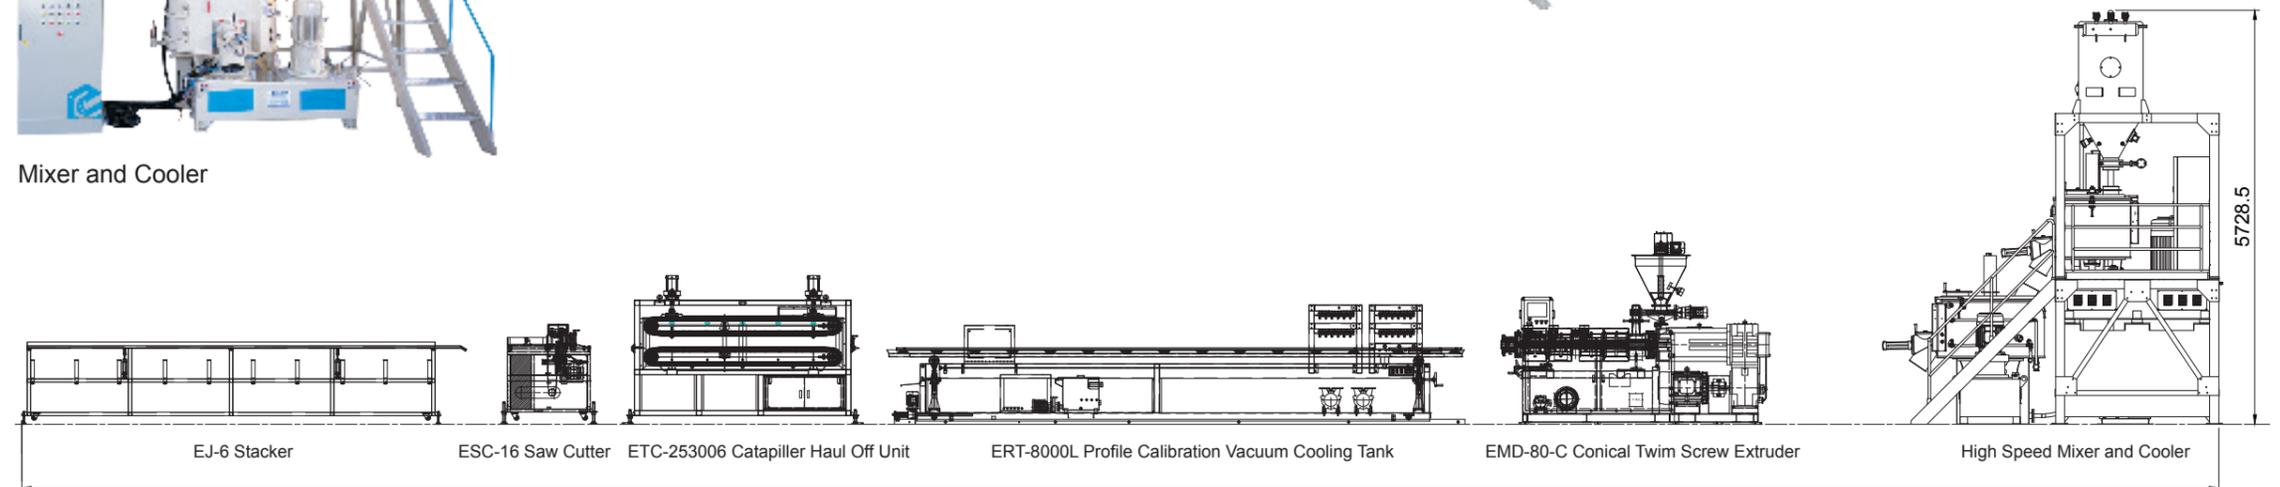

Products manufactured with these machines include construction materials, toys and stationery, furniture and furnishings, medical supplies, lighting decoration and electrical accessories. Since its founding EVERPLAST Machinery's production line has turned out more than 1800 extrusion systems over the years. The suitability of these products and their competitiveness on the market are directly related to the characteristic of the plastic materials involved and the processes and machine fittings used to make the extrusion products.

Extrusion Machine

PVC counter rotation twin screw extruder available in sizes of EMD-65, EMD-90, EMD-110 and EMD-130 for profile and compounding, output ranges from 100 to 800 KG/HR.

Single screw extruder comprises model EMS-35,45,55,65,85,100,120 and 150 to meet a wide range of requirements for extrusion types, materials, and application.

Precision grinding gears deliver a driving force that is more than 98 percent accuracy with noise levels under 65 dB.

"PID" thermo controller with "SCR" output temperature systems are used throughout to minimize power consumption and maintain temperature levels which are within one degree of set temperatures.

Along with cast aluminum cooling device on the barrel, and high efficiency driving motor and gears. That ensure consistent products and high outputs.

Optional extras:

1. Computer controller system.
2. P.T.A Treatment for screw.

Calibration Machine and Die

Utilizes vacuum pumps with ratings of 3 HP to 100 HP.
Cooling capacity of 30 KG/HR to 500 KG/HR.

Positions can be adjusted front and back or left and right. Front-back movements is done by a stepless inverter motor which can make either high speed or incremental adjustments. Water flowmeter cooling device is displayed to allow control of die temperatures and monitor temperature records. A specially designed die clamp frame allows vertical and horizontal adjustment to accept molds of all sizes. A phase control electrical protector guards against errors in vacuum pump rotation.

Haul-off Machine

1. Unit pulling force for the various series ranges from 200KG to 6000KG.
2. Line speed is adjustable from 0.1M/MIN to 100 M/MIN, and high-sensitivity clamps effectively meet the needs of every type of products.
3. Auto pressure balance system responds to varying shapes of products to avoid production shutdowns when processing product sizes are changed.
4. Microcomputer counter can be used to set the length of products and count the quantities of products.
5. Design of the large Haul-off machines includes thick, hardened glass sliding doors which provide a clear view of the production process with a high degree of safety. They also facilitate easy maintenance and repair.
6. Compound tracks use UHMW-PE with outstanding wear resistance and minimal pollution, and rubber caterpillars are specially flush designed for easy replacement.

Toolings

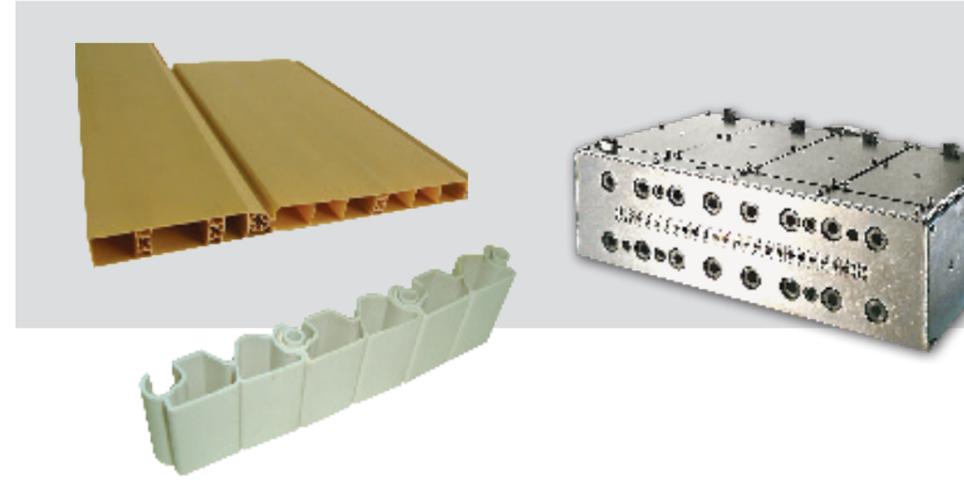

EVERPLAST boasts 20 years of activity and experience in the manufacture of dies and calibrators for the extrusion of profile sections in PVC, PC, PE, PP, PS, ABS and other plastic materials. It furthermore specializes in the production of custom made machines and accessories for extrusion and co-extrusion.

EVERPLAST concentrates particularly on equipment for high production rate with excellent extruded profile quality thanks to the exclusive use of the most modern Cad Cam systems, high technology computerized machines, and operators with advanced skills and leading computer experience.

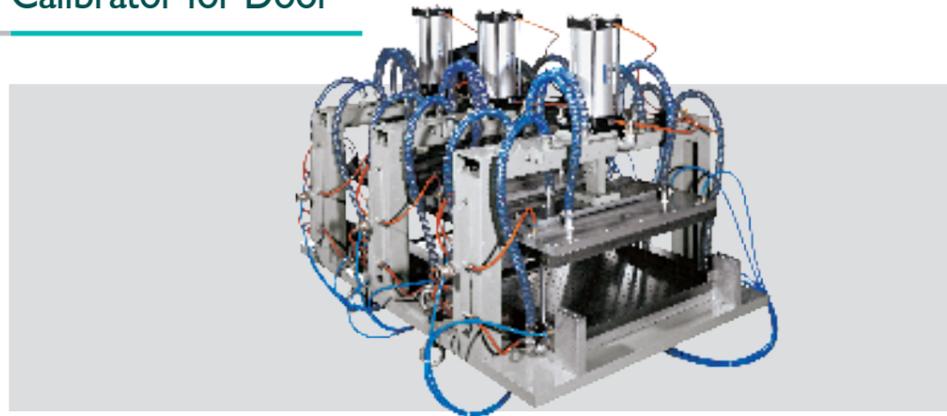

EVERPLAST produces equipment with single and multiple outlets for small as well as large size profiles in the following areas of application:

1. window, door
2. wall panel, cladding, ceiling and various constructional profiles
3. profiles for furniture
4. cable channels, conduit, tubes in PVC, PE, PP
5. co-extruded profiles for various materials

Printing System

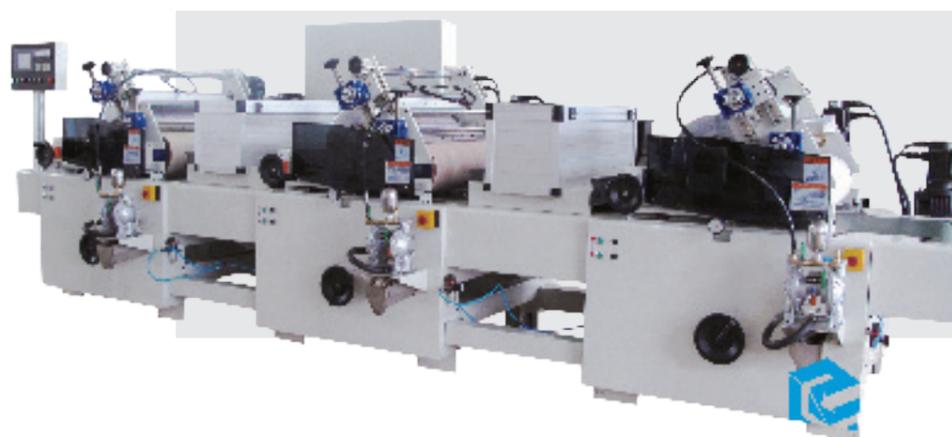

Over 25 years of continuous research in the field of coating technology, we are only providing our world class printing and coating equipments, but also achieving an outstanding acknowledgment over various paint materials. This enable us to constantly develop and upgrade series of high performance coating equipments, and each one will create the smooth, and brilliant coating surface for your specific requirement

Features:

1. Instant Curing: It eliminates the long waiting for drying up, and greatly shorten the process time through the entire finishing line.
2. Direct Fit To Coating Machine: This unit may be fitted to roller coater or flow coater for direct curing after product is cut saves the troubles of moving of the workpiece.
3. This machine provides added surface rigidity and brilliant color.
4. Application Versatility :U.V. paint coated products, e.g. panel furniture, components, steels, plates, construction material, ect, can be instantly cured.
